Application/Control Number: 10/849,971

Art Unit: 3727

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The relationship between the sidewall of claim 2 and the body and dome of claim 2 is unclear. It appears a base and a neck finish in claim 3 are double inclusions of those set forth in claim 2.

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 2, 4-6, 16 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shimada et al '291.

Members 8a and 8b define vacuum panels which are concave in one directing and convex in a second direction perpendicular to the first as claimed. The container is intended for hot fill use and members 10 and 12 define spaced ribs as claimed.

3. Claims 3, 8-11, 13, 14, 18-22, 24 and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over the references as applied to claim 1 above, and further in view of Bourque et al '754.

The provision of vacuum panels in the upper or dome portion of blow molded containers is well known as shown by Bourque et al. To have limited the vacuum

Application/Control Number: 10/849,971 Page 3

Art Unit: 3727

panels to the upper of dome portion of Shimada et al with others limited to the lower portion would have been obvious in view of Bourque et al.

4. Claims 1-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Garver et al '622, cited by applicant, in view of either Krishankumar et al '184 or Melrose '309.

Garver teaches a hot fill container with vacuum panels in the dome and spaced by ribs. The vacuum panels are characterized as being conventional in construction.

To have formed such vacuum panels as having a convex surface in one direction and a concave surface in a direction perpendicular to the first direction would have been obvious in view of the teaching by either Krishnakumar et al at 56 or Melrose at 8.

- 5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Yourist '425 shows another hot fill container with upper indented panels in the dome.
- 6. The following are suggested formats for either a Certificate of Mailing or Certificate of Transmission under 37 CFR 1.8(a). The certification may be included with all correspondence concerning this application or proceeding to establish a date of mailing or transmission under 37 CFR 1.8(a). Proper use of this procedure will result in such communication being considered as timely if the established date is within the required period for reply. The Certificate should be signed by the individual actually depositing or transmitting the correspondence or by an individual who, upon information and belief, expects the correspondence to be mailed or transmitted in the normal course of business by another no later than the date indicated.

## **Certificate of Mailing**

I hereby certify that this correspondence is being deposited with the United States Postal Service with sufficient postage as first class mail in an envelope addressed to:

Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450 Application/Control Number: 10/849,971 Page 4
